EXPERIMENT 6: WORKFLOW AUTOMATION USING DELUGE

Aim

To design and implement workflow automation in Zoho Creator using Deluge scripting to automate gym membership registration, send welcome emails to members, and reduce manual work in gym membership management.

Procedure

1 Log in to Zoho Creator and open the existing **Gym Membership System** application.

2 Navigate to the **Workflows** section in the application editor.

3 Create a new Form Workflow using the existing **Gym Membership Enrollment** form.

4 Name the workflow `On_Enrollment_Submit_Workflow`.

5 Configure the workflow to execute when a new membership record is **Created**.

6 Add a Deluge script action to the workflow.

7 Write a Deluge script using the `sendmail` task to send a welcome email to the newly registered member.

8 Configure the recipient email address, subject, and message using the appropriate fields from the membership form.

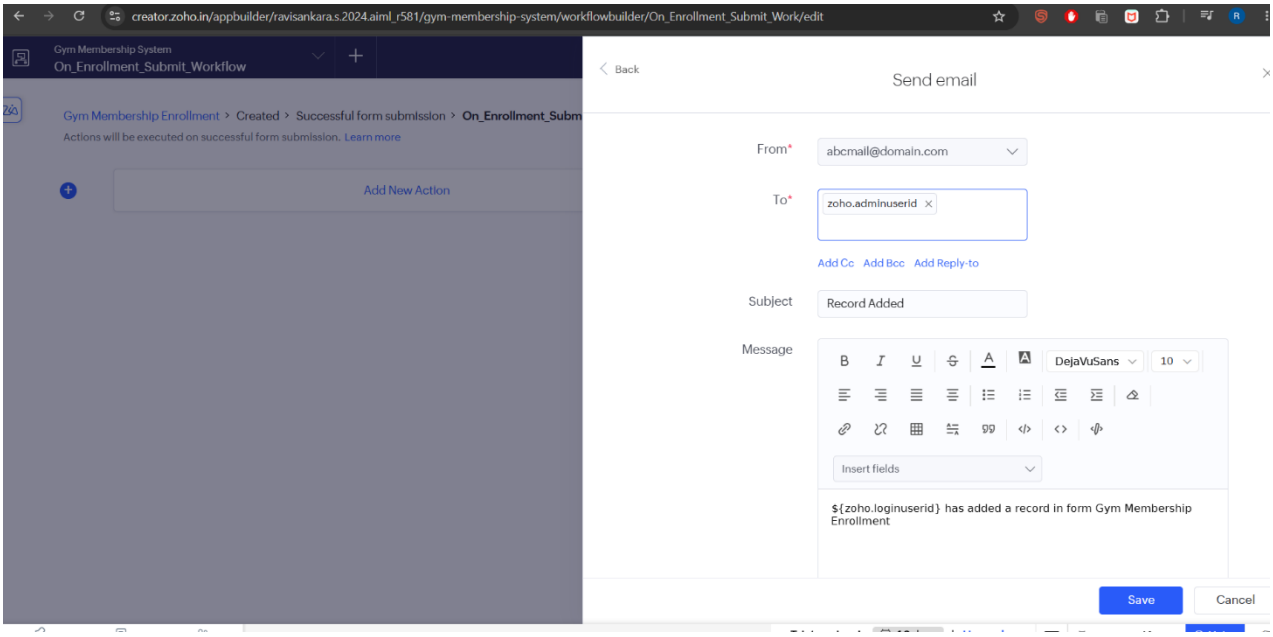

9 Save the Deluge script and workflow.

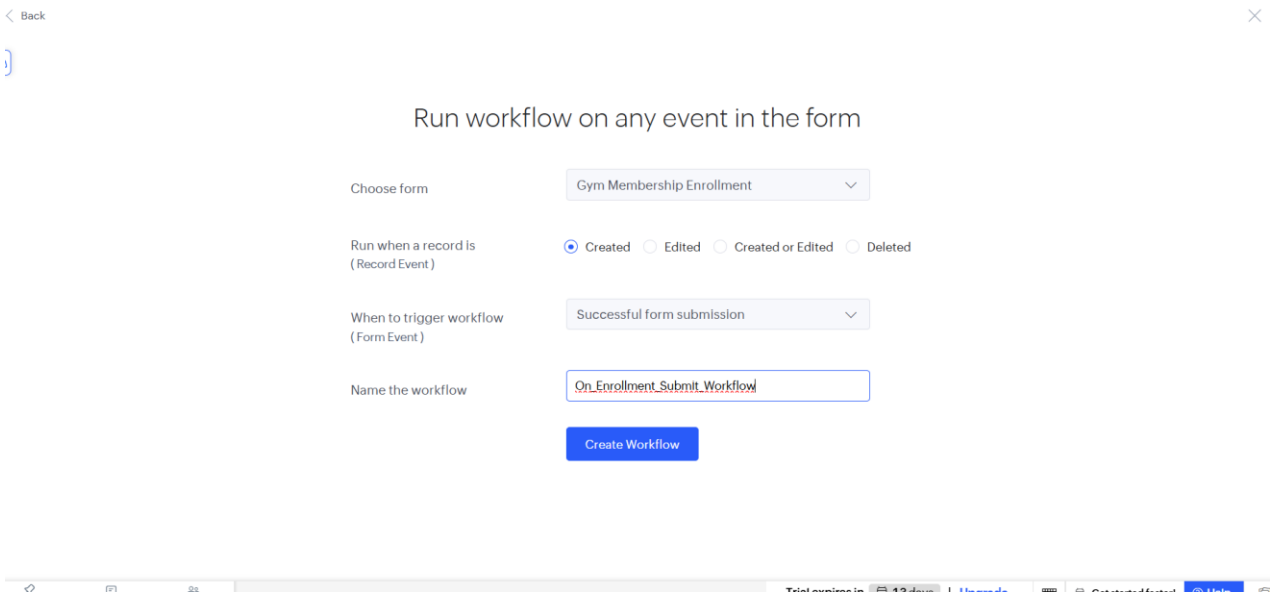

10 Open the application and submit a test membership registration using a valid email address.

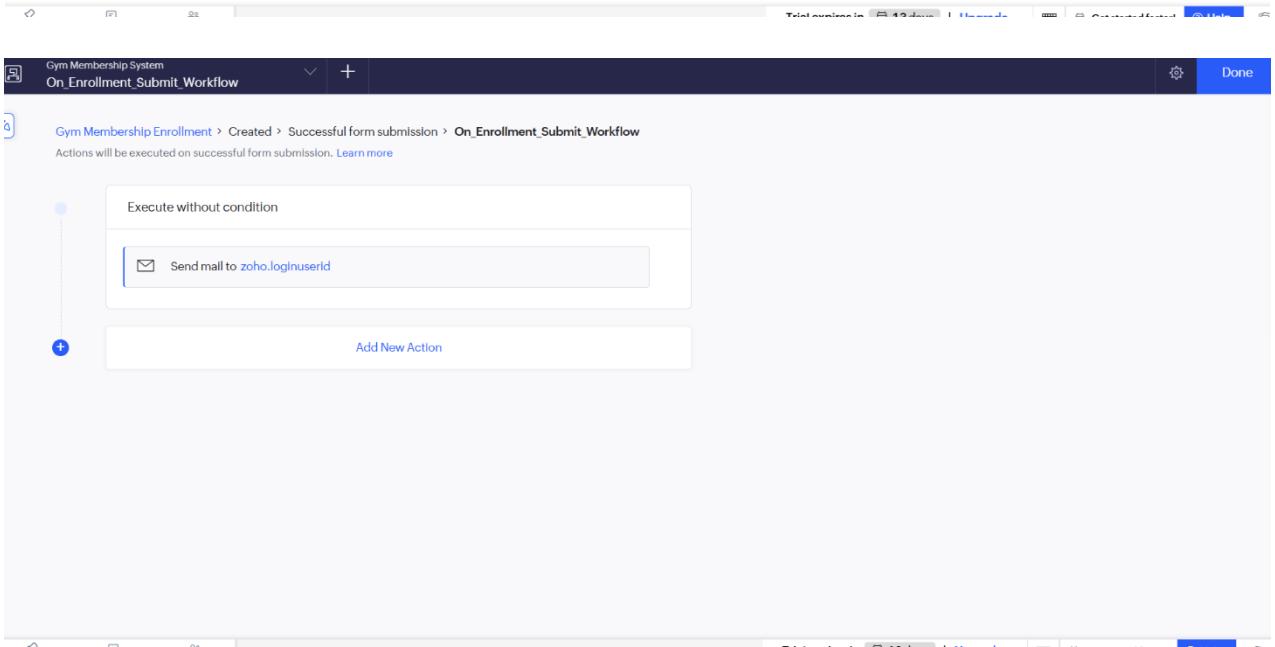

11 Check the member's email inbox to verify whether the welcome email was received.

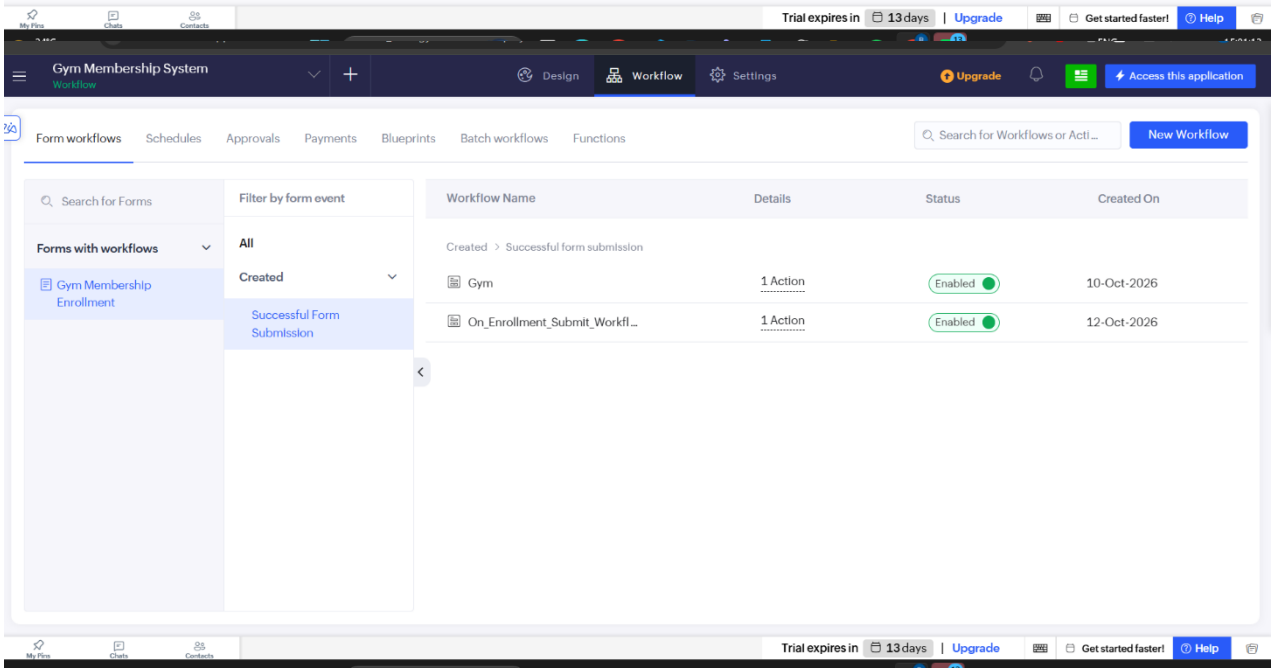

12 Verify that the workflow executes successfully when a new membership is submitted.

Screenshots:

Result

Thus, a Form Workflow was configured in Zoho Creator using Deluge scripting to automate the welcome email process for gym membership registration, reducing manual effort and improving communication with newly registered members.

Note: Use the actual email field name from the Gym Membership Enrollment form. The workflow is complete only after it is saved and the email is successfully tested.
